

ELECTRONIC VISA: WHAT YOU NEED TO KNOW AND HOW TO GET IT

The world is becoming more interconnected and globalized every day. More and more people dare to travel across the globe. Some come for the crazy adventures. Others travel to receive new experiences and make new great memories. Some people are just curious to see what is out there. Seeing new, different, and unique cultures for yourself is magic. No matter what exact purpose people have by going on such adventures, they all follow the basic rules of traveling. First of all, they research more about the country they are about to go to, they study the customs, and they see what entry requirements those countries have for their nationality.

Most countries around the globe have their special rules and regulations for border crossing. Some countries require visas. Some don't. Some need insurance. Others may not even let a single woman in unless a male guardian chaperones her. It is all very different. However, many countries have developed a simpler travel solution with the popularization of traveling and digitalization. They introduced an Electronic Visa. This visa shows how the travels in the future will look like. Let's see what it is, what it does, and how you can get it. Here's everything you need to know about e-Visa.

What is an e-Visa

The concept of e-Visa has only recently emerged in international relations. Though, it is fair to say it is catching up with many countries very quickly. Basically, e-Visa is a service that is replacing the need for a regular paper visa. Indeed, it is a digitized version of a visa. This service allows shifting the entire process of applying, checking, or granting a visa into a digital environment. The Internet plays the key role here, of course. A person who wants a new visa must collect all necessary documents and then submit them online. It is that simple. If any payments are involved, a person can also do it online. What's more, the decision on the application also is communicated to you only online. Many countries around the world have already introduced their versions of e-Visas. Some countries even plan to switch to online visas completely. The countries with the most successful launches of e-Visas are Turkey, Georgia, Australia, India, among others. You can see some of the best essay writing service reviews to find writers who can tell you the decision-making processes that turned these futuristic ideas into reality.

Where to apply for an e-Visa

First, you can get an e-Visa only to the countries supporting this system. Hence, before you plan your travels, you better research the entry requirements for the countries you visit. If you are traveling to one of the countries that have e-Visas, such as Moldova, New Zealand, or Kyrgyzstan, you can see how to apply for it. Also, keep in mind that some countries only open e-Visa services to certain nationalities. So even if a country supports the program, you should always check whether this service is eligible for your country of origin.

More often than not, these countries have special web-pages built specifically for these purposes. You should check the foreign affairs ministries' websites for further information if there is no separate site. Some ministries have the e-Visa application right on their sites. You should always be very careful about where you find the application form and how you apply it. After all, you are

sending out very important personal information and documentation. If you are unsure about the procedure, you should call the closest embassy of the country you are about to visit to ask for guidance.

Major concerns

By looking at the list of the countries that already have introduced e-Visas, you can see that there are not so many Western countries involved. It is true. So far, only about 20 countries have introduced unlimited online services to obtain visas. Other countries are either behind the whole game, or have already very easy visa requirements (for example, only visas on arrival), or have certain fears and prejudice. The virtual world is still, for the most part, poorly regulated. Cybercrimes and terrorism are still a major concern for governments. You can find any essay writing to explain to you why it is so complicated.

Overall, many fear shifting such important data to the online world completely. The fear of identity theft is common among common citizens too. Some students even fear leaving essay reviews, dreading their universities finding it was them. What to say about the older generations and their trust in the Internet? They rather pay a personal visit to an embassy than trust their fate to a website. Governments also fear forgery or hackers attacks that can leak personal data. As so, it seems like before more international laws on cybersecurity are in place, most countries won't fully shift into the digital world. Though, the future definitely belongs to the virtual world.
